

## PROJECT AREA

The Masai Mara wildlife dispersal area covers 430,000 hectares, of which only 136,800 hectares are protected within the reserve boundaries. We first began our work in the Mara Conservancy district, indicated on the map. We have now expanded our coverage to include about two thirds of the Masai Mara Reserve and four group ranches in the critical wildlife dispersal zone. The blue boundary delineates the Masai Mara Reserve and the green boundary the approximate area of our coverage during the last year. The four group ranches where we work are highlighted in different colors.
